

IN THE CREMATORY

1. Use NeutrOlene granules in the fiberboard container during transport or while waiting for cremation to take place.
2. For preliminary prep and viewing prior to cremation, use NeutrOlene granules liberally. Wash the body with NeutrOlene soap, spray inside the mouth and on the body before closing.
3. Spray NeutrOlene FM on the clothing of the deceased (NeutrOlene does not stain clothing) or place granules in the cremation insert/rental casket should there be any odor whatsoever during a chapel service or for viewing while at the crematory.
4. Place the NeutrOHang in the refrigeration unit to neutralize any organic odor where bodies are stored waiting for cremation to take place.
5. Launder bedding and sheets with NeutrOlene to clean and neutralize any odors.
6. To use NeutrOlene on floors, mix liberally in mop water.
